Introduction

R718B122 is a device used to detect object temperature. It can connect PT1000 platinum thermistor and join the gateway to display the collected data in the gateway. It adopts SX1276 wireless communication module.

Main Characteristic

- Adopt SX1276 wireless communication module
- One-gang PT1000 platinum thermal resistance detection
- Temperature range of -50 °C to 180°C
- When installing the adsorption type PT1000, the magnet must be pressed tightly, the contact surface must be flat and wiped clean, and heat-conductive grease is added to the object to be tested to make the heat transfer effect better
- 2 section of ER14505 lithium battery in parallel (AA size 3.6V / section)
- IP rating: Main body IP65/ IP67 (optional), sensor IP67
- The base is attached with a magnet that can be attached to a ferromagnetic material object
- Compatible with LoRaWAN™ Class A
- Frequency hopping spread spectrum technology
- Configuration parameters can be configured through a third-party software platform , data can be read, and alerts can be set through SMS text and e-mail (optional)
- Applicable to third-party platforms: Actility / ThingPark, TTN, MyDevices / Cayenne
